

ABSTRACT

A multifunctional roasting oven comprises a housing with a door that can be opened and closed, and a roasting chamber provided inside the housing, with a heater provided at the lower portion of roasting chamber, and a plurality of horizontal roasting tubes provided at the upper portion of the roasting chamber, the food products can be placed over the roasting tubes. The roasting tubes driven by a drive device may be rotated with the axes, respectively. The advantage is to resolve the problem of single-acting and discommodiousness use.
